Harmony unifies Playout, Production, and Audio Management into one system

- GREAT user interface. No more moving to another page to edit, the whole day is in front of you every hour. It's easy to jump around and adjust. Customizable – change colors, logos, and positions of the automation modules to get the custom look and feel you want.
- The timing feature is a valuable assist to any music programmer. As long as you program enough music, your hour will always come out around 0:00! Total time/gap time is displayed so you know if your hour is short or long.
- Actual play times are displayed on the log, not scheduled times. You will never guess when something will air again.
- Harmony monitors itself and reports its status continuously, so you'll know if something is wrong before it becomes a disaster.
- Advanced Segue Editor edit segues with a simple click. Zoom in to perform advanced functions like beat matching to create mix shows with ease!

- Get untethered from the production room window! Our Harmony remote control app lets you see the live status of your system on a tablet, phone, or PC. Know when it's time to go back on air from anywhere.
- When voice tracking, the talent hears the outro of previous song or event and the intro of the next one.
- Automatic Over-Sweep schedule dry voice tracks. Harmony will place the dry bed over the intro of the next song and post it perfectly every time! You can also automatically run music beds under dry tracks and bring the next song in over the intro!
- Live Log no more merging! Import local, Network, and programmatic traffic logs separately, and in real time, automatically. Harmony automatically detects new logs and brings in the changes without any human intervention.
- Advanced dayparting your audio will never be out of date again! Schedule cuts with start and end dates, as well as dayparting.

- Easy switchover to Harmony from any system Harmony support is there for you the whole way. Changing from your current system is easy, and there are no extra costs for installer. Auto-Importer is a big time saver. Your music, production elements, and spots are automatically organized and filed where they need to be.
- Audio Transcoder bring in audio with metadata, from external sources or automation systems.
  Harmony can read metadata from multiple systems used in broadcast for easy file ingest and conversion.

## Synchronicity Integration

- Infinitely scalable. The automation and production suite can be extended to your entire station group. Control multiple stations from one location, simultaneously.
- Centralized content and playlists make changes from anywhere directly to air with ease.
- Use the production feature to automatically create shows to distribute through SyncDirect. No more need for stand-alone audio editors. Save a lot of time!
- Multi-Market Voice Tracking track your whole group from one or more locations without advanced networking.
- Our exclusive SyncRecord Module makes it easy to record news, weather, sports, or even podcasts, and instantly inject them into Harmony, or distribute them to all of your affiliate stations.

## Send an email, Tweet, or add a Facebook post from your log. Post songs as you play them to social media to create a live in studio feeling with your audience.

- Live Time/Temperature announcements.
- GPIOs can be send and received through the audio card, making satellite shows easier to run.
- Ads can have multiple meta data outputs, which can be dayparted and scheduled with expirations and rotations for each cut.
- Easily air any SyncLive stream source directly through the automation with our stream play deck.
- Import and convert any file from any source with custom rules. Bring in media files with odd names and embedded dates into the system, add your cart numbers, and Harmony takes care of the rest. No more paying other expensive services to bring ads or shows into your system for you.
- Missing copy reports are generated instantly get a list of missing audio for both music and traffic.
- Real Time Programmatic ready live, instantaneous insertion of programmatic ads directly from agencies without needing to schedule them.

## **Powerful Hardware**

Every installation is custom built to requirements:

- Intel Core i9-9900 Processor
- 16G RAM
- Intel Optane RAM
- 2TB Hard Drive
- 2TB Backup drive
- Windows 10 Pro LTSC

Whisper quiet while running in your studio.
